

G5137PK Digital QR PSR Power Switch with Peak Load

Digital Power ™

1.0 General Description

The G5137PK is a high performance AC/DC power supply controller which uses digital control technology to build peak current mode PWM flyback power supplies. The device operates in quasi-resonant mode to provide high efficiency along with a number of key built-in protection features while minimizing the external component count, simplifying EMI design and lowering the total bill of material cost. The device can operate at peak power mode with momentary peak power higher than the maximum continuous output power without design cost and size increase. The G5137PK removes the need secondary feedback circuit achieving excellent line and load regulation. It also eliminates the need for loop compensation components while maintaining stability over all operating conditions. The limit function power optimized transformer design in universal off-line applications and allows for a wide input voltage range. GlobalSemi's innovative proprietary technology ensures that power supplies built with the G5137PK can achieve both highest average active efficiency and have fast dynamic load response in a compact form factor in typical applications.

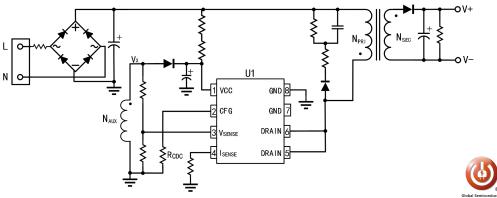

Features

- No-load power consumption < 75 mW at 230 VAC along with fast dynamic load response
- ◆ Tight constant-voltage regulation across line and load range
- Peak power mode provides momentary peak power higher than the maximum continuous output power without design cost and size increase
- Primary-side feedback eliminates optoisolators and simplifies design
- Proprietary optimized 90 kHz maximum PWM switching frequency with quasiresonant operation
- No external loop compensation components required
- ◆ User-configurable 5-level cable drop
- ◆ Built-in single-point fault protection features: output short-circuit protection, output over-voltage protection, over-current protection , current-sense-resistor fault protection .
- ◆ No audible noise over entire operating range

Applications

- Compact AC/DC adapter/chargers for media tablets and smart phones
- AC/DC adapters for consumer electronics

TYPICAL Application

2.0 Products Information

2.1 Pin configuration

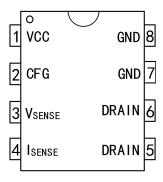

Figure 2.1: G5137PK Series (8 Lead DIP8 Package)

| Pin# | Name | I/O | Description |
|------|--------------------|--------------|--|
| 1 | VCC | Power Input | Power supply for the controller during normal operation. |
| | | | The controller will start up when VCC reaches 14.0 V |
| | | | (typical) and will shut down when the VCC voltage drops |
| | | | below 6.5 V (typical). A decoupling capacitor of 0.1 µF or |
| | | | so should be connected between the VCC pin and GND. |
| 2 | CFG | Analog Input | Used to configure external cable drop compensation (CDC) at the beginning of start-up and provide accurate |
| | | | over-voltage protection during normal operation by sensing output voltage via auxiliary winding. |
| 3 | V _{SENSE} | Analog Input | Sense signal input from auxiliary winding. This provides the |
| | | | secondary voltage feedback used for output regulation |
| 4 | I _{SENSE} | Analog Input | Primary current sense. Used for cycle-by-cycle peak current |
| | | | control and limit. |
| 5/6 | DRAIN | Output | HV MOSFET Drain Pin.The Drain pin is connected to the |
| | | | primary lead of the transformer |
| 7/8 | GND | Ground | Ground. |
